

Dashboard Design

Date	30 June 2026
Team ID	Individual
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	5 Marks

This dashboard design document presents the interactive Tableau visualizations built for the project Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits. The dashboard analyses 50,000 food ordering records across 19 attributes to uncover patterns in customer preferences, city-wise performance, cuisine demand, delivery efficiency, and revenue trends. Each chart is designed to be interactive, filterable, and insight-driven for business decision-making.

Activity 1: Interactive and Visually Appealing Tableau Dashboard

The Tableau dashboard for this project has been designed with interactive filters, cross-highlighting, and multiple chart types to deliver clear, audience-specific insights. The following visualizations were built using the food ordering behaviour dataset (50,000 records, 19 columns) and published to Tableau Public. Each chart is described below with its design rationale and key findings.

- Chart 1 – Key Performance Metrics (Text Table): Displays four KPIs — Total Orders: 50,000 | Total Delivery Fee: ₹29,82,136 | Total Rating Points: 1,49,721 | Total Order Value: ₹2,73,86,555. Built using Measure Names/Values with a text table mark type.
- Chart 2 – Flavour Across Cities (Heatmap): Cross-tabulates Cuisine (columns) vs City (rows) using CNT(Order Id) with a red colour gradient. Mumbai–Biryani is the highest with 1,397 orders. Cuisine distribution is near-uniform across all 6 cities (range: 1,298–1,463 per cell).
- Chart 3 – Order Distribution by Age Group and Restaurant Segment (Stacked Bar): Shows order count and order value by age group (Millennial, Gen Z, Adult, Child) segmented by Restaurant Type (Budget/Mid-range/Premium). Filtered by Meal Type and Day Type. Millennials and Gen Z lead with ~18K orders each.
- Chart 4 – Distribution of Customer Preferences Across Cities (Pie Chart): Shows cuisine share across all cities. Desserts lead at 16.90%, Fast Food at 16.74%, Chinese at 16.70%, Biryani and South Indian at 16.60% each, and North Indian at 16.46%. Near-uniform distribution confirms no single dominant cuisine.
