

Story

Date	1 July 2026
Team ID	Individual
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Every City Orders Almost Every Cuisine:** Cuisine demand is near-uniformly spread across all 6 cities, with order counts ranging between 104 and 129 per city-cuisine cell. Mumbai orders the most Biryani while Delhi shows comparatively lower Fast Food demand.
- **Millennials and Gen Z Order the Most:** Younger age groups dominate food ordering. Budget and Mid-range restaurants attract the most orders, showing that price is a key factor in ordering decisions.
- **All 6 Cuisines Are Almost Equally Popular:** Desserts lead slightly at 16.90% while North Indian trails at 16.46%, but the difference is very small — customers have diverse and balanced tastes.

- **People Ordering with Family or Friends Spend More:** Group orders peak during Lunch and Snacks, while solo diners (Alone) order more at Dinner time — useful for targeted meal-time promotions.
- **Mumbai Gets the Most Orders:** Mumbai leads with 8,443 orders, but the gap between the highest and lowest city (Hyderabad, 8,262) is only 181 orders, showing consistent platform adoption across all cities.
- **Breakfast Brings in the Most Money:** Breakfast contributes the highest revenue at ₹69.24 lakh, while Dinner earns the least at ₹67.46 lakh — surprising given that dinner is usually considered a peak meal time.
- **Hyderabad Customers Place Orders the Fastest:** Hyderabad is the fastest city for order placement (5,006 mins total) and Bangalore the slowest (5,463 mins), though the small gap indicates a consistent ordering experience across all cities.

Activity 2:

Publish Story on Tableau Public and Paste Public link below
