Data Collection Plan & Raw Data Sources Identification Template

This report outlines the data collection plan and raw data sources identified for the project Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits. It ensures meticulous data curation and integrity by documenting the source, format, size, and access details of all datasets used for analysis and Tableau dashboard development.

Data Collection Plan Template

Section	Description
Project Overview	This project analyses food ordering behaviour and consumer trends using a dataset of 50,000 records across 19 attributes including order value, delivery fee, cuisine type, meal type, city, mood, hunger level, and weather conditions. The objective is to build an interactive Tableau dashboard that uncovers patterns in customer preferences, city-wise performance, delivery efficiency, and revenue drivers to support data-driven business decisions in the food delivery industry.
Data Collection Plan	The primary dataset was sourced from Kaggle — a publicly available food ordering behaviour dataset in CSV format containing 50,000 rows and 19 columns. No additional external APIs or web scraping were required as the dataset comprehensively covers all

	required dimensions: demographic attributes (age, city), behavioural attributes (mood, hunger level, company), order attributes (cuisine, meal type, restaurant type, order value, delivery fee), and contextual attributes (day type, order time, rainy weather). The dataset was downloaded directly and stored locally for preprocessing and Tableau ingestion.
Raw Data Sources Identified	One primary raw data source was identified: food_ordering_behavior_dataset.csv — a structured CSV file containing 50,000 food order records with 19 columns covering order details, customer demographics, behavioural context, and delivery information. The dataset is clean, complete, and publicly accessible with no licensing restrictions for academic and analytical use.

Raw Data Sources Template

Source Name	Description	Location/URL	Format	Size	Access Permissions
food_ordering_behavior_dataset.csv	50,000 food order records with 19 columns: order_id, user_id, age, city, order_time, day_type, cuisine, meal_type, restaurant_type, order_value, discount_applied,	https://www.kaggle.com/datasets/food-ordering-behaviour	CSV	3.8 MB (50,000 rows x 19 columns)	Public

	delivery_fee, time_taken_to_order, rating_given, is_repeat_order, mood, hunger_level, company, rainy_weather. Covers 6 cities, 6 cuisines, 4 meal types. Order values range ₹100–₹999 (avg ₹547.73). Fully clean with zero nulls and zero duplicates.
